

User Acceptance Testing (UAT) Report

Functional Specification & System Test Sign-off

Date:	04 October 2026
Team ID:	SWTID-2026-5601
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	10 Marks

1. Project Overview

Project Name:	Auto Ticket Classification using Flow Designer
Project Description:	The school IT helpdesk receives multiple support requests daily from students and teachers related to common issues such as network connectivity, hardware failures, account access problems, and system performance issues. Currently, IT staff manually review each ticket to identify the issue type, select the correct category and subcategory, and inform the caller about ticket creation. This manual process is time-consuming, error-prone, and not scalable as the number of requests increases. The automated solution leverages Flow Designer and machine learning classifiers to automate categorization and caller notifications instantly.
Project Version:	Version 1.0
Testing Period:	30 September 2026 to 30 September 2026

2. Testing Scope & Environment

Testing Scope (Features & Functional Requirements):

- Automated Ticket Ingestion & Validation: Ingestion of support emails and web portal tickets submitted by students and teachers.
- Issue Classification Engine: NLP and Flow Designer rule engine for auto-categorization into Network Connectivity, Hardware Failures, Account Access, and System Performance.
- Subcategory & Metadata Assignment: Auto-populating subcategories and urgency routing based on keywords and historical ticket patterns.
- Automated Caller Notification: Real-time confirmation emails and SMS/system alerts dispatched to ticket creators upon successful record creation.
- Helpdesk Escalation & Analytics Dashboard: Reporting module tracking classification accuracy and resolution throughput.

Testing Environment:

URL / Location:	https://school-it-helpdesk.service-now.com/flow_designer_uat
Credentials (if required):	Role: UAT_Tester_Admin Username: uat.testerschool-it.edu / Pass:

3. User Acceptance Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Automated Category Assignment for Network Issues	1. Submit a support request titled 'WiFi disconnected in Lab 2'. 2. Trigger Flow Designer automated workflow. 3. Verify category assignment.	Ticket automatically categorized under Category: Network, Subcategory: Wireless.	Ticket successfully ingested and tagged as Network > Wireless.	PASS
TC-002	Hardware Failure Classification	1. Create ticket stating 'Projector in Room 104 power supply failure'. 2. Run classification engine. 3. Inspect created record fields.	Category auto-selected as Hardware; Subcategory: Display/Projector.	Correctly categorized as Hardware > Display/Projector.	PASS
TC-003	Account Access Lockout Auto-Handling	1. Submit request: 'Teacher portal password reset locked out'. 2. Validate automated tagging and priority routing.	Category: Account Access; Subcategory: Password Reset; High Priority assigned.	Tagged as Account Access > Password Reset with High Priority.	PASS
TC-004	Caller Notification Automation	1. Generate ticket from student portal. 2. Verify instant notification trigger via Flow Designer email step.	Automated confirmation email containing Ticket ID and SLA sent to caller.	Confirmation email sent instantly to caller inbox.	PASS
TC-005	System Performance Anomaly Classification	1. Submit issue: 'Gradebook app loading extremely slow'. 2. Verify workflow classification logic.	Category: System Performance; Subcategory: Application Latency.	Categorized accurately as System Performance > Application Latency.	PASS

4. Bug Tracking Matrix

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Minor delay in SMS notification dispatch under peak ticket load.	1. Ingest 50 simultaneous test emails. 2. Measure SMS gateway latency.	Low	Closed	Optimized Flow Designer queue batch size to 100 ms; verified resolution.
BG-002	Ambiguous category for combined hardware/network issues.	1. Submit ticket: 'Router power light off and no WiFi'. 2. Observe primary classifier.	Medium	Closed	Added secondary fallback rule to prioritize primary failure root cause.

5. Sign-off & Operational Notes

Tester Name:	SWTID-2026-1128 UAT Lead Evaluator
Date:	30 September 2026

Signature:

APPROVED & SIGNED (Digital Verification Token: UAT-20260930-PASS)

Operational Notes & Directives:

- Ensure that all test cases cover both positive and negative scenarios prior to final production deployment.
- Encourage testers to provide detailed feedback, including any suggestions for UX or automation improvement.
- Bug tracking must strictly log details such as severity, status, root cause, and steps to reproduce.
- Obtain formal sign-off from both the project manager and product owner before proceeding with production deployment.
